

## Trading department of EnBW AG to use electricity price forecasting from ProCom

**Aachen (Germany), 22 June 2017** - The electricity price forecast service from consulting house ProCom GmbH supports the trading division of Energie Baden-Württemberg (EnBW) to provide reliable planning and marketing in day-ahead auctions on the EPEX SPOT. The electricity price forecast is based on a multistage algorithm, which uses artificial neural networks. Input variables used include electricity loading, wind and solar forecasts, plus daily schedules, power plant availability and fuel prices. The price forecasting performs to a high accuracy even in uncertain market situations. The EnBW uses a forecasting solution with a range of four days, which is updated three times per day. Alternatively, ProCom offers a six-day forecast as part of its market information services.
